

RAINIER R. MARASIGAN

PROFESSIONAL SUMMARY

Full-stack Software Engineer with hands-on experience leading a small developer team to design and deliver web applications. Proficient in JavaScript/TypeScript, Node.js, React/Next.js, Express, Python/Flask, Flutter, and relational/NoSQL databases; experienced in building responsive UIs, designing RESTful APIs, writing tests, and implementing CI/CD for more reliable releases. Strong collaborator focused on improving code quality and accelerating delivery; completing BS Information Technology (Business Analytics) and seeking entry-level/full-stack roles to build user-centered solutions.

EXPERIENCE

Department of Information and Communications Technology | *Intern - Full-stack Developer*

February 2026 - May 2026

- Led a small developer team to design and deliver full-stack web applications for internal government use, overseeing frontend, backend, deployment and maintenance.
- Implemented responsive UI components and user flows, and built RESTful APIs with robust database integration to ensure reliable data management.
- Collaborated closely with QA and stakeholders to debug, write unit tests, and optimize performance, decreasing defects and accelerating release cycles.
- Maintained clear technical documentation and introduced basic CI practices to improve team efficiency and code quality.

PROJECTS

AI-Driven Data Analytics and Scheduling System | *Full-stack, Lead and AI Developer*

- Designed and built a full-stack appointment and branch management web app empowering businesses to manage services, staff, vouchers, and multi-branch scheduling.
- Implemented AI-powered customer service and predictive sales/appointment forecasting using Scikit-learn and RAG Flowise to automate responses and surface actionable insights.
- Developed role-based access (customers, admins, owners), interactive sales and appointment dashboards with Recharts, and RESTful APIs for robust data handling.
- Deployed on a Hostinger VPS with CI workflows for reliable releases and improved operational efficiency, reducing manual scheduling overhead.

Procurement Monitoring System | *Full-stack and Lead Developer*

- Led full-stack development of a web-based procurement monitoring system to track procurement projects and streamline oversight during my DICT internship.
- Designed dynamic role-based access control and permission levels for administrators and staff to secure workflows.
- Developed real-time analytics dashboards and project-tracking features to monitor procurement status across the lifecycle.
- Focused on usability, reliable data flows, and maintainable APIs to improve transparency and decision-making for stakeholders.

GrocerEase | *Full-stack and Lead Developer*

- Led full-stack development of GrocerEase, an e-commerce platform with role-based access and OAuth authentication using React, Node.js, Express, and MongoDB.
- Built customer flows for browsing, cart, and checkout, plus an admin dashboard with Recharts for product, order, and sales management.
- Deployed frontend on Vercel and backend on Render; optimized admin workflows and reporting to support faster operational decisions.

LostU | *Mobile and Lead Developer*

- LostU is a Flutter mobile app that centralizes lost & found reporting and recovery for Batangas State University, replacing informal manual processes with a secure, user-friendly platform.
- Implemented student and admin interfaces to report, browse, claim, and manage lost items through a centralized workflow.
- Built an admin panel for moderation, analytics, and post management to speed up item recovery and administrative handling.
- Instrumented Firebase Analytics to generate insights used to improve reporting flows and recovery rates.

Market Pulse AI | *Vibe coder and Lead Developer*

- Built a Market Pulse AI landing site and live sentiment preview using Next.js 16, Tailwind CSS v4 and shadcn-style components.
- Leveraged GitHub Copilot and GPT (Claude/GPT-4o) for rapid prototyping and content assistance during development.
- Consumes static JSON datasets (pricing tiers, sentiment distribution, assets) and renders interactive visualizations and a sample price trend chart for demoing sentiment-driven UI concepts.

Recipe Finder | *Fullstack and Lead Developer*

- Designed and built a recipe search website using React and the Spoonacular API
- Implemented search, filtering, and recipe detail pages to help users discover recipes quickly.

SKILLS

- Programming Languages:** Javascript, Typescript, NodeJS, Dart and Python
- Frameworks:** ReactJS, ExpressJS, NextJS, Flask and Flutter
- Databases:** MongoDB, Firebase, MySQL, and PostgreSQL
- AI Tools:** Claude Code, Antigravity and Github Copilot
- Data Cleaning, Analysis and Visualization:** Google Colab, Pandas, Numpy and Matplotlib
- Version Control and Deployment:** Docker, Git, Github, Vercel, Render and Hostinger VPS

EDUCATION

Batangas State University - TNEU | 2022 - 2026

BS Information Technology Major in Business Analytics

CERTIFICATES

- JavaScript Essentials 1 & 2
 - Python Essentials 1 & 2
 - Introduction to Data Science
- Data Analytics Essentials
 - Data Science Essentials with Python
 - Introduction to Modern AI
